

TOLUWANI FORTUNE AKINTOYE

PROFESSIONAL SUMMARY

I am a Computer Science graduate (2:1) and Software Engineer specializing in Deep Learning architectures (CNN-Transformers), Relational Database design, and Workflow Automation (n8n). Post-NYSC, I am actively expanding my expertise across AWS infrastructure and advanced SQL, dedicated to driving backend performance and operational efficiency in high-impact teams.

WORK HISTORY

Web Content Administrator C Developer (NYSC), 01/2025 - 12/2025

Cyclofoss Technologies Limited, Lagos, Nigeria

- Platform & Database Operations: Managed backend CMS operations and MySQL listings for a high-traffic job portal, maintaining 100% data integrity and system availability across thousands of records.
- Quality Assurance & Validation: Executed rigorous data validation scripts and resolved frontend/backend content formatting issues to enforce publication standards.
- Workflow Optimization: Collaborated with engineering teams to identify portal bugs, streamlining data ingestion pipelines and operational efficiency for internal teams.

Full Stack & Machine Learning Engineer, 10/2025 - current Freelance / Self-Employed, Lagos, Lagos

- Deep Learning & Applied ML: Developed custom deep learning classification pipelines (CNNs and Hybrid CNN-Transformers) for image artifact and pattern analysis using PyTorch and Python.
- Workflow Automation: Engineered serverless n8n automation backends (e.g., Caroline's Foods), automating JSON parsing and database updates to reduce administrative overhead by 40%.
- Full Stack Development: Architected and deployed responsive web portals (e.g., Purple Love Foundation) with integrated payment gateway webhooks and multi-currency support.

EDUCATION

Bachelor of Science, Computer Science, 11/2020 - 08/2024
Mountain Top University - Ogun - Honours

House 7, Ezeoba Drive, Officers Quarters, Navy Town Barracks Ojo, Amuwo-Odofin, Lagos, Nigeria, 101010

+234 911 930 2052

SKILLS

- Programming & ML: Python (PyTorch, TensorFlow, Pandas, NumPy, Scikit-learn), JavaScript (ES6+), React.js, React Native.
- Databases & Cloud: SQL (Schema Design, Query Optimization, PostgreSQL/MySQL), REST APIs, AWS (S3, Lambda, IAM, Redshift).
- Automation & DevOps: n8n Workflow Automation, Webhooks, Git/GitHub, Postman, CI/CD basics.

- Second Class Upper (2:1)
- Final CGPA: 4.26 / 5.00
- Leadership: Class Representative (Served for 4 consecutive years).
- Student Leadership Advocate for Nigeria Association of Computing Students (NACOS), Mountain Top University Chapter
- Machine Learning Project: Built a Sentiment Analysis Predictive Model using Python (NLP) and LSTM Classifiers.

CERTIFICATIONS

- AWS Certified Data Engineer – Associate (DEA-C01) | In View
- n8n AI Agent Builder Certification | Simplilearn (Jan 2026)
- NYSC Discharge Certificate | Jan 2026
- React JS Certification | New Horizons
- Mobile App Development (Flutter) | New Horizons
- Python Programming | New Horizons

KEY PROJECTS

Hybrid CNN-Transformer for Image Forgery Detection

- Architected a deep learning pipeline combining CNNs for localized feature extraction and Vision Transformers (ViT) for global contextual self-attention.
- Built automated preprocessing, augmentation, and patch-extraction modules in PyTorch to identify image splicing and copy-move manipulations.

Applied Statistical Analysis & Predictive Data Modeling

- Designed statistical programming workflows in Python (Pandas, SciPy, Statsmodels) for multivariate analysis, hypothesis testing, and regression modeling.
- Implemented missing-value imputation and feature variance quantification pipelines to extract actionable research insights.

Business Process Automation (Caroline's Foods)

- Engineered an automated n8n workflow to capture web orders, parse JSON payloads, and update central spreadsheets in real time.
- Eliminated manual data-entry errors and reduced operational processing overhead by 40%.
